Summary

A new way of innovation that brings the power into your hands through investments and fund management. A paper trading platform that utilizes in-game credits to invest but pays out all profits in our native token FDXD.

A user will have the ability to create custom index funds made up of their own favorite tokens. In-game credits will be utilized to invest in funds which will reflect live pricing that will either net a gain or loss based on the timestamp when the credits were invested. A user can choose to close out the fund at any point and the average P/L% will reflect whether a profit or loss has been made.

In the instance of a loss, the percentage loss will be adjusted and deducted from the users credit balance. In the instance of a profit, the user will receive their gain in FDXD token at the equivalent credits amount. FDXD will be paid out based on a "mint on demand" treasury fund. The supply will only ever circulate based on user winnings in a fund.

1 Player selects 5 coins to create their own custom index and invests 1,000 credits at "Timestamp 1". Let's assume 30 days have passed and we are now at "Timestamp 2".

Index	Timestamp 1	Change	Timestamp 2	Profit	
Coin 1	\$17,206.00	4.61%	\$18,000.00	Credits Investment	1,000
Coin 2	\$1,326.00	17.04%	\$1,100.00	Average Change	7.35%
Coin 3	\$0.08	12.50%	\$0.09	P/L	73.5
Coin 4	\$0.05	20.00%	\$0.06	FDXD Earned	73.5
Coin 5	\$0.06	16.67%	\$0.07	Loss	
				Credits Investment	1,000.00
				Average Change	7.35%
				P/L	(73.5)
				Adjusted Credits	926.5

- 2 Most coins have grown in profit with some loss, but after taking the average change of the index, we get a total P/L of 7.35%
- 3 Looking at the top right, a 1,000 credits investment with a change of 7.35% would net a 73.5 gain. This calculated gain would reflect a payout of 73.5 FDXD.
- 4 Let's assume the opposite happened, looking at the bottom right, the 5 coins averaged out to a loss of 7.35%. In this case, no FDXD would be paid out as there was no gain. Instead, the initial credits balance would be adjusted by a 7.35% loss, resulting in a new balance of 895.90 credits.
- 5 Keeping the simple 1:1 ratio of credits to FDXD payouts keeps a more clear understanding and fair payout regardless of changing market variables.

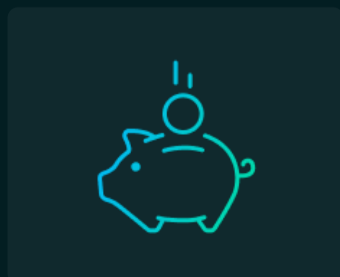

Our Brand

The platform was inspired by the idea of creating a paper trading game that utilizes in game credits but pays out real FDXD rewards. This gives you a chance to showcase your skills and compete against the community to earn your place without the risk of your personal funds.

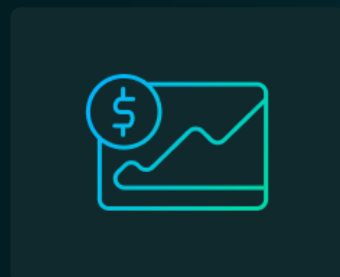

Due to the large variation of tokens to index, no two funds will be the same. Strategize your path to success by earning the most FDXD to hold larger weights in the staking pool and receive more passive income. Findexd utilizes NFT's with the primary purpose of utility while complementing the work of art. FDXD tokens will plan to serve further utility purposes that will complement features on the platform and bring more use-cases to our token. Through Findexd, we aim to create a brand that brings earning potential in your hands. We strive to maximize the utility and value of FDXD for our investors and community. Join us to learn more and see how we serve the people through our innovative paper-trading platform.

Investing

Staking

Tokenomics

NFT Integration

Tokenomics

FDXD will have uncapped supply for the reason that the actual circulating supply will be made up strictly of tokens that have been released based on investors "profits" earned.

So, the first investor to profit on the platform will be considered the first holder and first FDXD created. No FDXD will be premined for the team, investors, outside entities, etc. One of the main incentives to earn FDXD will be the utilization of FDXD in the staking pool where users can earn passive income.

NFT sales will be the main allocation to the tokenomics reward cycle. A large portion of all NFT sales will directly fund the reward pool which will be a variable monthly payout based on long-term sustainability.

70% will be dispersed strategically among WAX rewards payout pools, competition rewards, and other user sharing incentives

20% of NFT sales will go to the team for future growth, innovation, and profits

10% will be dispersed to the liquidity bank which will buy-back FDXD from the markets and burn it

NFT Sales Allocation

Staking

The primary utility of FDXD is the staking pool mechanism implemented for players to stake their FDXD in return for a pool weight that determines payouts.

$$\text{Staking Weight \%} = \frac{\text{Staked User Amount}}{\text{Total Staked FDXD Supply}}$$

These values may increase or decrease based on the number of users. Staking reward structure will payout calculated portions from the WAX rewards pool monthly. A user's reward from staking can be calculated based on this formula:

$$\text{Monthly Earning} = \text{Staking Weight} \times \text{WAX Reward Pool}$$

The staking model utilizes a monthly lock up and payout structure. To ensure fairness and no exploiting, you must opt to stake per the below schedule's windows, or you will be required to wait until the next month. Staking will be implemented after the full platform launch to give time for users to earn FDXD. Here is the schedule for the staking model.

Monthly Schedule	30 day month
Day 1 - 5	Staking pool opens
Day 6	Staking pool closes
Day 6 – Day 29	Month 1 Lock-up
Day 30	Month 1 Rewards Payout

Deflationary Burn Mechanism

To build on the goal of sustainability, we decided to add another deflationary burn mechanism which will burn 2% of users staked FDXD after each month's staking release. So, upon the return of a user's staked FDXD, 2% will be burned. Deflationary tokenomics create a balance of supply and demand to strive for long-term sustainability while also creating an everchanging fair environment to active players vs stagnant players. Active and continuous earners will remain above the deflationary curve each month, where stagnant users that aren't striving to earn will remain below the deflationary burn curve and will quickly balance into lower staking weights.

NFT's

We will be airdropping free NFT's in the form of a one-time use voucher that will allow anyone to try Findexd without risk. This allows users to have a chance to earn FDXD for free without needing any funds for their first time using the platform.

Findexd primary NFT's will bring to life common symbolic animals in the investing world into uniquely generated "business suited" warriors for utility and enhancement on the platform. To maximize user's experiences, a market warrior will be utilized for growth and additional features. Warriors will also have dynamic variables including their leveling experience system and energy recharging. They will be sold as standard or premium packs consisting of 1 or 3 warriors along with credits. Standard cases will be unlimited and premium cases will be limited to 10k, Class 5 and Class 6 NFT's are only found in the premium cases.

Standard Briefcase – \$25 – Unlimited - Includes 1 warrior and 250 credits

- 1 Class 1 – 3 Warriors – Gray Level – 50% chance
- 2 Class 2 - 2 Warriors – Bronze Level – 30% chance
- 3 Class 3 - 2 Warriors – Silver Level – 16% chance
- 4 Class 4 - 2 Warriors – Gold Level – 4% chance

Premium Briefcase – \$75 – 10,000 - Includes 3 warriors and 1,000 credits

- 1 Class 1 – 3 Warriors – Gray Level – 50% chance
- 2 Class 2 - 2 Warriors – Bronze Level – 30% chance
- 3 Class 3 - 2 Warriors – Silver Level – 15% chance
- 4 Class 4 - 2 Warriors – Gold Level – 3.75% chance
- 5 Class 5 - 2 Warriors – Platinum Level – 1% chance
- 6 Class 6 - 2 Warriors – Diamond Level – 0.25% chance

Each warrior can be equipped on the platform to allow play and leveling. The leveling will follow a tiered system that is determined by total profit percent.

- 1** Level 1 – Total profit of 25%
- 2** Level 2 – Total profit of 50%
- 3** Level 3 – Total profit of 100%
- 4** Level 4 – Total profit of 150%
- 5** Level 5 – Total profit of 200%
- 6** Level 6 – Total profit of 300%

The benefit of leveling up your warrior will give you bonus features slated for the future which include fund expansions, exclusive discords access, attributes, accessories, and more. The future attribute drops will change the way the game is played by adding new features that can increase earnings potential, require more strategic planning, and bring further competitive edge to the indexing game.

Energy will be one of the other changing variables among market warriors. Energy equates to “investing days” on the platform. Each warrior will always start with a default of 60 energy (investing days). Once these days are depleted through indexing, you will be required to recharge their energy (days) at the USD rate of \$0.10 per day. Bringing in another utility for FDXD is the ability to use FDXD to purchase more energy. Days can be purchased using FDXD or WAX in cases where FDXD is not available. In the case where FDXD is used to purchase energy, 100% of those FDXD funds will be burned.

We have also implemented a future method to craft lower tier NFT’s that can recycle them into the next tier with a chance for higher tier warriors. Crafting will require a certain amount of each NFT class and a minimum amount of FDXD or WAX to craft. 100% of FDXD received for crafting will be burnt.

The allocation of WAX used for energy and crafting will be as follows:

40% will be dispersed to the liquidity bank which will buy-back FDXD from the markets and burn it.

40% will be dispersed to reward pools.

20% will be dispersed to the team.

Energy and Crafting Allocation

Roadmap

Subject to change, here is the targeted roadmap that is anticipated:

Q3 2023

- Project Introduction
- Landing page website
- Whitepaper
- Community growth

Q4 2023

- Free vouchers airdrop
- Platform Concept

Q1 2024

- NFT Market Warriors Drop 1
- Full platform launch
- Indexing
- Staking

Q2 2024

- Attributes Drop 1
- Attributes utilization on platform
- NFT Crafting

Q3 2024

- Attributes Drop 2
- Indexing competitions

Disclaimers

The coins available to index will consist of many of the most popular coins with variations and additions in the future. In-game credits will be exclusive to the Findexd platform only and cannot be traded or sold once they have been redeemed from their NFT form. Be advised that the decision making is 100% skill based and in the users' hands, there are no outside factors of luck or influence through this platform. FDXD is designed to be utilized on the platform for staking purposes only, any outside trading and secondary exchanges are not affiliated with Findexd. No profit-sharing percentages will ever decrease to the users and community, if changes are made, team fund percentages will be adjusted. Findexd will always strive to keep the community interest and satisfaction top priority by providing a platform for the people.
